Product recommendations

This document shows how to create and configure a merchandising campaign.

Episerver Personalization is the most advanced personalization tool set on the market. At its heart is the T3 platform, a third-generation, proven technology that delivers consistently outstanding results. Episerver Personalization is easy to implement on every page of your website, working to maximize the impact of personalized product recommendations.

Each product recommendations widget on your site is configured in the Episerver back-end according to a pre-agreed strategy. Each widget can have its own strategy depending on the identified KPIs for personalization. If there is more than one widget served on the same page, each of the widgets also can have a different strategy.

A **strategy** comprises a number of algorithms, developed by Episerver's data scientists and machine learning experts. The algorithms are applied to each widget in a stack formation. This means that the personalization engine looks at the visitor's behavior, and tries to return a product recommendation matching the first algorithm in the stack. If the system is unable to identify a suitable product, it looks at the next algorithm in the stack, and so on, until the required number of products for this widget are returned.

Episerver's [Recommendations interface](#) lets you refine the product recommendations generated by Episerver algorithms, or override Episerver product recommendations to execute specific merchandising campaigns in accordance with your overall site strategies and targets.

You can control merchandising rules in the Episerver for the Personalization Portal, switching them on/off and changing them in real time.

Accessing the Recommendations interface

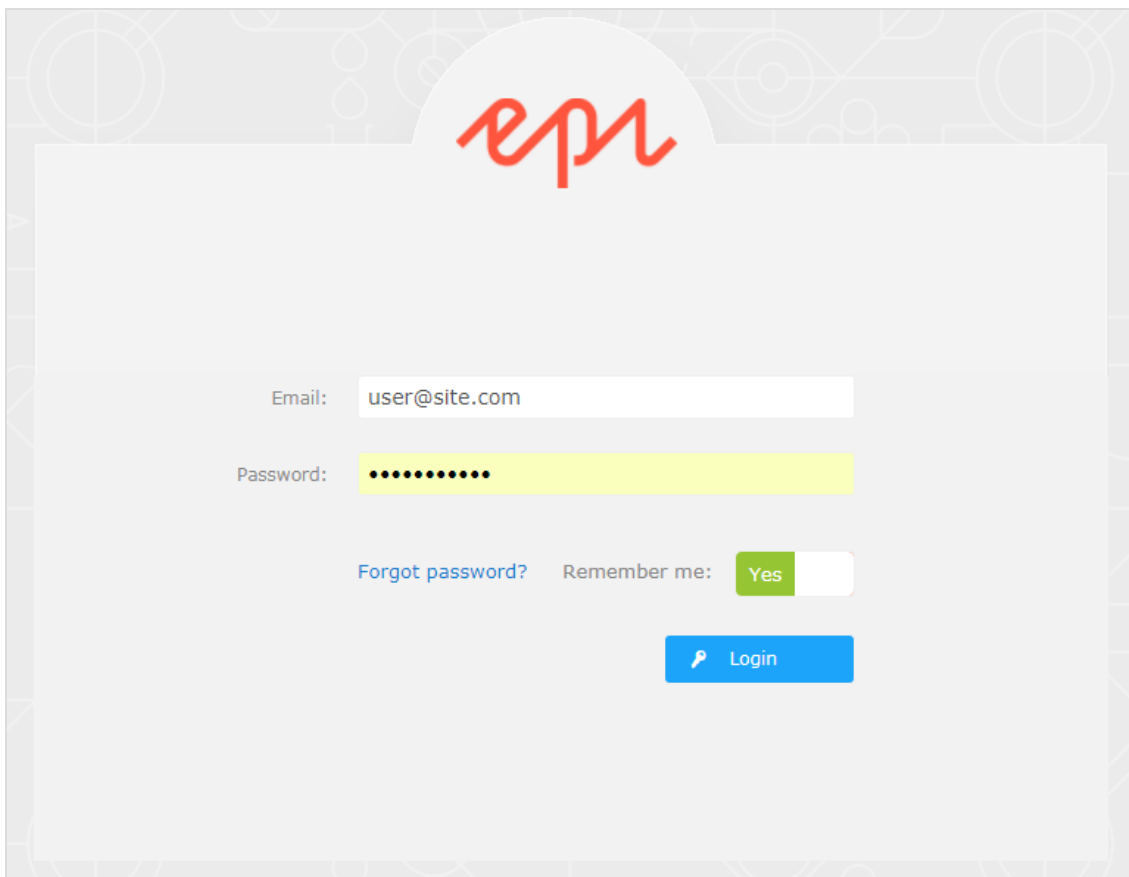

The Recommendations interface is available in the Episerver for the Personalization Portal.

1. Access the Episerver for the Personalization Portal at the URL provided to you when your user account was created. This will be one of the following URLs:

<https://smartmanager.peerius.com/admin>

<https://smartmanager.peerius.episerver.net/admin>

2. Log in to the Episerver for the Personalization Portal with your provided credentials. If you do not have your login details, contact developersupport@episerver.com.

3. Select the **Recommendations** tab in the navigation bar. In the Recommendations interface, you can create new merchandising campaigns, and view or edit the campaigns that you have already set up.

The screenshot shows the Episerver Recommendations interface. At the top, there is a navigation bar with 'Reports', 'Recommendations', 'Mail', 'Triggers', and 'Promote' menus, and an 'Account' button. Below this is a sub-navigation bar with 'Campaigns', 'New campaign', and 'Product sets' tabs. The main heading is 'Manage your Recommendations merchandising campaigns' with a 'Create a new campaign' button. A search bar is present above a table of campaigns.

Campaign name	Page type	Widget alias	Start date	End date	Created date	Modified date	Edit - Status - Delete - Copy
Front Page Strategy	Product page	productwidget1	Aug 31, 2017	-	-	-	
Reco Slider (Demo)	Product page	productwidget1	Oct 09, 2018	-	-	-	
Test-Campaign	Product page	productwidget1	Feb 12, 2019	-	Feb 12, 2019	Feb 12, 2019	

- 4. Click **Create a new campaign** to start setting up a new campaign. See Setting up a Mail campaign (in the Mail user guide) or [Setting up a merchandising campaign](#).
- 5. To edit an existing campaign, click the campaign name or **Edit** next to it.

Setting up a merchandising campaign

To create a new merchandising campaign, click **Create a new campaign** from the **Recommendations** overview screen, or select the **Recommendations > New campaign** tab. The campaign editing screen appears. The set-up process involves the following steps:

1. [Configuring main campaign details](#)
2. [Defining master rules](#)
3. [Defining product recommendation rules](#)
4. [Applying exclusions](#)
5. [Setting up activation and preview](#)

Configuring main campaign details

In the **Details** tab, configure the main details of the merchandising campaign: **name**, **location** and **position** of the widget to which the merchandising campaign is applied.

1. Enter a name for the campaign you are creating, such as *Product Page Promotion* or *Brand Rule*.

The screenshot shows the Episerver Perform interface. At the top, there is a navigation bar with 'Reports', 'Recommendations', 'Mail', 'Triggers', and 'Promote' menus, and an 'Account' dropdown. Below this is a secondary navigation bar with 'Campaigns', 'Configuration', and 'Product sets' tabs. The main content area is titled 'Configure your campaign:' and features a dropdown menu set to 'Test-Campaign' and a 'Create a new campaign' button. Below this is a breadcrumb-style navigation bar with tabs for 'Details', 'Master rules', 'Recommendation rules', 'Exclusions', and 'Activation and preview'. The 'Details' tab is selected. In the 'Details' section, there are three input fields: '[?] Name' with the value 'Test-Campaign', '[?] Widget location' with a dropdown set to 'Product page', and '[?] Widget position' with a dropdown set to 'productwidget1'. At the bottom right, there are 'Save campaign' and 'Cancel' buttons.

2. Select the widget location; this is the page type where the target widget of the Merchandising campaign is located.

The screenshot shows the 'Configure your campaign' interface for a campaign named 'Test-Campaign'. The 'Widget location' dropdown menu is open, displaying a list of page types: 'Please select a page type', 'Home page', 'Product page', 'Basket page', 'Category page', 'Search page', 'Wish List page', 'Checkout page', 'Order page', 'Brand page', and 'Attribute page'. The 'Product page' option is currently selected in the dropdown.

3. Select the widget you want this campaign to be applied to. The widget position drop-down lists available widgets on the selected destination page.

The screenshot shows the 'Configure your campaign' interface for a campaign named 'Test-Campaign'. The 'Widget position' dropdown menu is open, displaying a list of widget IDs: 'Please select a position', 'productwidget1', and 'productwidget2'. The 'productwidget1' option is currently selected in the dropdown.

Defining master rules

Tip: Setting up **Master rules** is optional.

Master rules let you refine the merchandising campaign effects to pages, products, or visitors. If you do not specify any master rules, the merchandising rules are applied globally across the selected widget for a campaign. If you apply a Master rule, it must be satisfied to apply product recommendation rules.

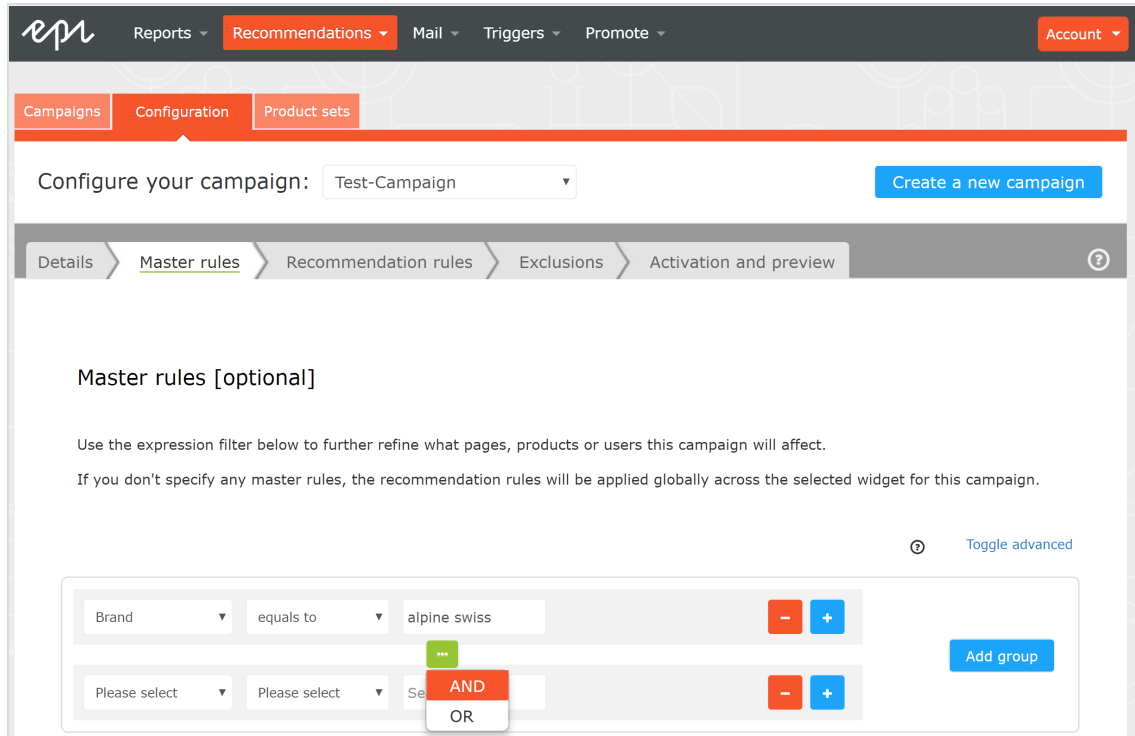

Examples of **Master rules** frequently used:

Use case	Master rule	Recommendation rule
Recommend only products from the same brand as the current product being viewed.	Brand equals to and type the brand name in the Search field.	Brand equals to and type the brand name in the Search field.
Recommend a specific product SKU when a specific product is viewed (i.e. override with a hand-picked product).	Ref Codes equals to and type the product SKU.	Ref Codes equals to and type the product SKU.
Only recommend products above a specific price when a user is viewing a product above a certain price.	Sale Price greater than or equals and type in the price (such as 25).	Sale Price greater than or equals and type in the price (such as 25).
Do not recommend discounted products when a user is viewing a full priced product.	Discount equals to False.	Discount equals to False.

1. To add a Master rule, select the product attribute for your products from the drop-down menu. The attributes are based on the product feed, plus a few attributes that Episerver creates by default. If you do not see the attribute that you want, add it to your product feed.
2. Select the condition you want in your rule. For attributes that have a text value, such as **Color** or **Brand**, choose between **equals to** or **NOT equals to**. For attributes with a numeric value, such as **Sale price** or **Unit price**, you also can use comparison operators like **greater than** or **less than**.
3. In the text field, enter the value of the attribute to be evaluated. For most attributes, a drop-down list shows values when you click in the text field. You also can start typing in the box to filter the results. To select a value, click on it. Numeric values (such as prices) do not have a pre-populated list; enter the value manually.

The screenshot shows the Episerver Recommendations configuration interface. At the top, there is a navigation bar with 'Reports', 'Recommendations', 'Mail', 'Triggers', and 'Promote' menus, and an 'Account' button. Below this is a secondary navigation bar with 'Campaigns', 'Configuration', and 'Product sets' tabs. The main content area is titled 'Configure your campaign:' and features a dropdown menu set to 'Test-Campaign' and a 'Create a new campaign' button. A breadcrumb trail at the bottom of the main area includes 'Details', 'Master rules', 'Recommendation rules', 'Exclusions', and 'Activation and preview'. The 'Master rules [optional]' section contains explanatory text and a 'Toggle advanced' link. A rule configuration box is shown with 'Brand' selected, 'equals to' as the operator, and a dropdown menu open showing 'A', 'alpine swiss', 'amerileather', 'aurielle-carryland', and 'Last viewed'. The configuration box also includes minus and plus buttons, an 'Add group' button, and 'Save campaign' and 'Cancel' buttons at the bottom right. A copyright notice '© 2019 Episerver' is visible in the bottom left corner.

Note: You can add multiple rules by clicking the **Add group** or **+**. When using multiple rules you can choose how you want them to interact by setting the **AND** or **OR** operator.

Note: To remove a rule, click minus - next to it.

Defining product recommendation rules

Create and configure the rules to be applied to the product recommendations shown in your widget. You can apply a rule to positions in the widget. You also can create different rules for each position, or leave a position blank to show the default output of the Episerver algorithms.

The screenshot shows the Episerver Recommendations configuration interface. At the top, there's a navigation bar with 'epi' logo, 'Reports', 'Recommendations', 'Mail', 'Triggers', and 'Promote'. Below that, a secondary navigation bar has 'Campaigns', 'New campaign', and 'Product sets'. The main heading is 'Configure your Recommendations merchandising campaign' with a 'Create a new campaign' button. A breadcrumb trail shows 'Details' > 'Master rules' > 'Recommendation rules' > 'Exclusions' > 'Activation and preview'. The 'Recommendation rules' section is active, showing instructions to create and configure rules. Two rule configurations are visible: Rule 1 (Category equals to Bags) and Rule 2 (Brand equals to penny chic AND Color equals to red). A 'Recommendation rules' widget on the right shows three positions: position 1 has rule 1, position 2 has rule 2, and position 3 is empty.

- Use the drop-down fields to add the required criteria for the product recommendations in the same way as you would for a [Master rule](#).
- You can add more than one criterion in the same rule by using **+**, and the **AND** and **OR** operators.
- After you finish setting up your rule, drag and drop the rule number to the required position in the widget, where you want it applied. The following image shows rule 1 applied to product position 1, and rule 2 applied to product position 2. In the previous image (Configure the rules), rule 2 is applied to both product positions 2 and 3. If you want the same rule to apply to all products in a widget, click **Apply to all**.

The screenshot displays the 'Recommendation rules' configuration page. At the top, there's a navigation bar with 'Recommendations' highlighted. Below it, a breadcrumb trail shows 'Details', 'Master rules', 'Recommendation rules', 'Exclusions', and 'Activation and preview'. The main heading is 'Recommendation rules' with a sub-heading 'Create and configure rules to be applied to the recommendations in your widget.' and a note: 'You can apply a rule to any number of positions in the widget: simply edit a rule and drag and drop it to the desired widget positions.' The interface features two rule configuration panels on the left and a widget preview on the right. The first rule panel is labeled '1' and has 'Apply to all' selected. It contains two conditions: 'Brand equals to BRAND1' and 'Color NOT equals to red', connected by an 'AND' operator. The second rule panel is labeled '2' and has 'Apply to all' selected. It contains two conditions: 'Category null or equals to Bags' and 'Please select Please select Search'. A 'Toggle advanced' link is present for each rule. The widget preview on the right shows a vertical list of four positions. Position 1 is highlighted with a red arrow pointing from the first rule panel. Position 2 is highlighted with a red arrow pointing from the second rule panel. Position 3 is labeled 'Drag & drop rule or Leave blank for default.' and Position 4 is labeled 'Drag & drop'. A '+ Add new rule' button is at the bottom left.

- You can add more than one rule to the same merchandising campaign, if want to apply different rules to different positions in the same widget. For example, you can apply rules for the first product to have a sale price of **25.00** or more, the second product between **15.00** and **24.99**, and the third product under **15.00**. To add another rule, click **Add new rule**.

Leave blank for default.

- Click the currency code to select another currency code from the resulting menu.

The screenshot displays three filter rules stacked vertically, each with a blue sidebar containing a plus icon and the number '1', '2', and '3' respectively, and the text 'Apply to all'. The first rule (1) has a dropdown for 'Sale price', a comparison operator 'greater than or equal to', and a value 'GBP 25.00'. The 'GBP' text is circled in red. A dropdown menu is open over the 'GBP' text, listing currency codes: GBP, USD, EUR, AED, AFN, ALL, AMD, ANG, AOA, and ANP. The second rule (2) has a dropdown for 'Sale price', a comparison operator 'greater than or equal to', and a value 'GBP 25.00'. The third rule (3) has a dropdown for 'Sale price', a comparison operator 'less than', and a value 'GBP 25.00'. A 'Toggle advanced' link is visible in the top right corner of the first rule's panel.

- Click Toggle Advanced if you want to manually enter the coding.

The screenshot displays a filter rule with a blue sidebar containing a plus icon and the number '2', and the text 'Apply to all'. The main area contains a text box with the SQL query: `(r.saleprice["GBP"]>="15.00" and r.saleprice["GBP"]<"25.00")`. Below the text box are two filter rules. The first rule has a dropdown for 'Sale price', a comparison operator 'greater than or equal to', a currency dropdown set to 'GBP', and a value '15.00'. The second rule has a dropdown for 'Sale price', a comparison operator 'less than', a currency dropdown set to 'GBP', and a value '25.00'. A 'Toggle advanced' link is visible in the top right corner.

Applying exclusions

Tip: Exclusions are optional.

This feature lets you specify products that you do not want to show in the widget specified in the merchandising campaign (in the **Details** tab). For example, you set up a product recommendation rule to show products from a specific brand – *BRAND1* – but there are some products from *BRAND1* that you actually do not want to show.

In the search field you can type a product SKU/refCode or title to find the product you want to exclude from recommendations. Click on the products in the results to add them to the exclusions list, and click **Finished** after you have added your exclusions.

The screenshot displays the Episerver Merchandising interface for configuring a Recommendations campaign. The top navigation bar includes the 'epr' logo and menu items: Reports, Merchandising, Mail, Triggers, Promote, and Account. Below this, there are tabs for Campaigns, New campaign, and Product sets. The main heading is 'Configure your Recommendations merchandising campaign' with a 'Create a new campaign' button. A breadcrumb trail indicates the current location: Details > Master rules > Recommendation rules > Exclusions > Activation and preview. The 'Exclusions' section is titled 'Exclude products' and provides instructions: 'Specify any products that you don't wish to show in the recommendations.' Below this, there is a search field and a list of 'Products to exclude from recommendations:'. Three products are listed in blue boxes: 'White Shirt Product:123', 'Blue Shirt Product:234', and 'Denim Shirt Product:345'. Below these, 'Product456' is listed. A 'Finished' section shows 'Printed Shirt Product456'. At the bottom right, there are 'Save campaign' and 'Cancel' buttons. The footer shows '© 2017 Episerver'.

Activating and previewing

In the **Activation and Preview** tab, specify a start and end date for your merchandising campaign, select days of the week to run the campaign, and preview the campaign using a product or category.

The screenshot shows the Episerver Perform interface for configuring a Recommendations merchandising campaign. The top navigation bar includes 'Reports', 'Merchandising', 'Mail', 'Triggers', 'Promote', and 'Account'. The main navigation tabs are 'Campaigns', 'New campaign', and 'Product sets'. The current view is 'Configure your Recommendations merchandising campaign', with a 'Create a new campaign' button. The breadcrumb trail is 'Details > Master rules > Recommendation rules > Exclusions > Activation and preview'. The 'Activation and preview' section is divided into two columns: 'Date and time' and 'Advanced options'. The 'Date and time' section includes a 'Specify when this campaign will run.' label, 'Start' (27/09/2017 17:30), 'End', and 'Time zone: Europe/London'. The 'Advanced options' section includes 'Select all' and 'Clear selected' links, and checkboxes for all days of the week (Monday through Sunday). Below this is the 'Preview recommendations' section, which includes instructions on how to specify what an imaginary user is viewing. It has input fields for 'Products viewed:' (with a search placeholder) and 'Category viewed:' (with a search placeholder). A 'Preview' button is located below these fields. At the bottom right, there are 'Save campaign' and 'Cancel' buttons. The footer shows '© 2017 Episerver'.

When a campaign is ready, click **Save campaign** and return to the **Campaigns** tab. New campaigns are inactive by default, so find your campaign and click **Play** to activate it. You can pause/deactivate a campaign in the same way. Changes are applied immediately to your site.

The screenshot shows the Episerver Merchandising interface. At the top, there is a navigation bar with the Episerver logo and menu items: Reports, Merchandising (selected), Mail, Triggers, Promote, and Account. Below this is a sub-navigation bar with Campaigns (selected), New campaign, and Product sets. The main heading is "Manage your Recommendations merchandising campaigns" with a "Create a new campaign" button. A table lists three campaigns:

Campaign name	Page type	Widget alias	Start date	End date	Edit - Status - Delete - Copy
Casual trousers	Home page		05-Aug-2017	-	[Edit] [Status] [Delete] [Copy]
Exclude Product	Home page		17-Oct-2017	31-Oct-2017	[Edit] [Status] [Delete] [Copy]
Product Page Promotion	Product page		27-Sep-2017	-	[Edit] [Status] [Delete] [Copy]

A tooltip "Activate it" is visible over the status icon of the "Product Page Promotion" campaign. The footer contains "© 2017 Episerver".

Product recommendation reports

This topic shows analytic reporting for Episerver Personalization. Analytic reports let you see the success of your campaigns, and which Personalization efforts work or do not work.

The reporting functionality in Episerver Personalization covers a variety of useful information.

Perform users and administrators can track and graphically monitor the following items:

- Total orders, revenue, and products sold
- Order, revenue and products sold through recommendations
- Average order value and units per order uplifts with product recommendations
- Best Performing pages
- Best Performing Widgets

Attribution Model

The Episerver Perform Attribution model is the industry standard. If a visitor visits your site and clicks on a Perform recommendation, and then returns to the site within 30 days and buys the product they clicked and converted on, then full attribution for the conversion is given to Perform.

Example

If a visitor engages with a product recommendation, returns to the site and purchases the item, plus other items they were not recommended, Episerver Perform is only attributed the revenue generated from the recommended item and that they engaged with (clicked on) - *not* the entire basket value.

For example: A visitor is recommended a T-shirt for \$5.50 while browsing the site. The visitor clicks on the recommended T-shirt, however they leave the site without purchasing. The visitor returns later that day and purchases 2 of the T-shirts they were recommended and engaged with. They also purchase a jumper for \$14 that they were not recommended. The order total is \$25 and the total revenue attributed to Perform would be \$11 (which is 2 T-shirts at \$5.50 each). If the visitor buys multiple units of the same item that was recommended to them and they clicked on, this collective sum is attributed to Perform. Equally, if it was just one item, the sole value of that one item is attributed to product recommendations.

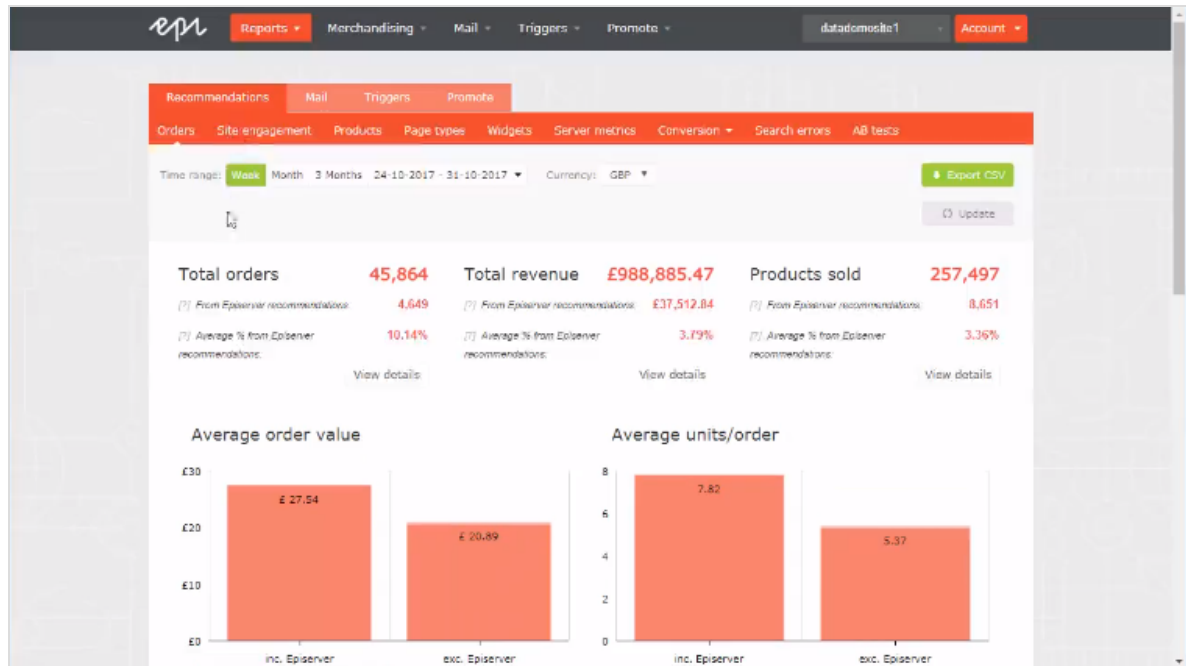

Perform can produce a graph that plots attribution against time. This shows when most people convert after being shown a product recommendation. The metrics used are CPC (Click to purchase conversion) against time. On average, 85% of conversions occur within 24 hours.

Orders tab

The **Orders** tab shows orders from online channels tracked by Episerver Personalization.

From the **Reports** tab, select **Recommendations**, then click on the **Orders** tab.

- **Time range.** At the top of the page you can choose the time range for the reports. **Week** is the default selection, which shows information from the past 7 days. You can also choose **Month**, **3 Months** or a custom time range. When you change the time range, click **Update** to refresh the results.
- **Currency.** Select the currency you would like to report on.
- **Export CSV.** You can export any of the reports you are viewing to a CSV file by clicking **Export CSV**.
- **Total orders.** Shows the total number of transactions tracked on the site as two units of measurement.
 - **Episerver Recommendations.** The number of orders in which an Episerver product recommendation was purchased.
 - **Average percentage from Episerver recommendations.** The percentage of orders in which an Episerver product recommendation was purchased.
- **Total revenue.**
 - **From Episerver recommendations.** Shows the revenue generated from products bought through product recommendations, which is measured by totalling the unit value of products clicked and purchased via recommendations.
 - **Average % from Episerver recommendations.** Shows the percentage of total revenue from Episerver product recommendations.

- **Products sold.** Shows the total number of units sold on the site.
 - **From Episerver recommendations.** Shows the revenue generated from products bought through product recommendations.
 - **Average % from Episerver recommendations.** Shows the average percentage of products sold from Episerver product recommendations.
- **Average order value.** Shows the average value of orders that contained an Episerver product recommendation compared to those that did not over the period.
- **Average units/order.** Shows the average number of units purchased in orders that contained an Episerver product recommendation compared to those that did not.
- **Recommendation revenue from Episerver.** Shows a graphical view of the total revenue from product recommendations (left-hand axis), and % of product recommendation revenue (right-hand axis), with the time period on the base line, to monitor the peaks and troughs in behavior.

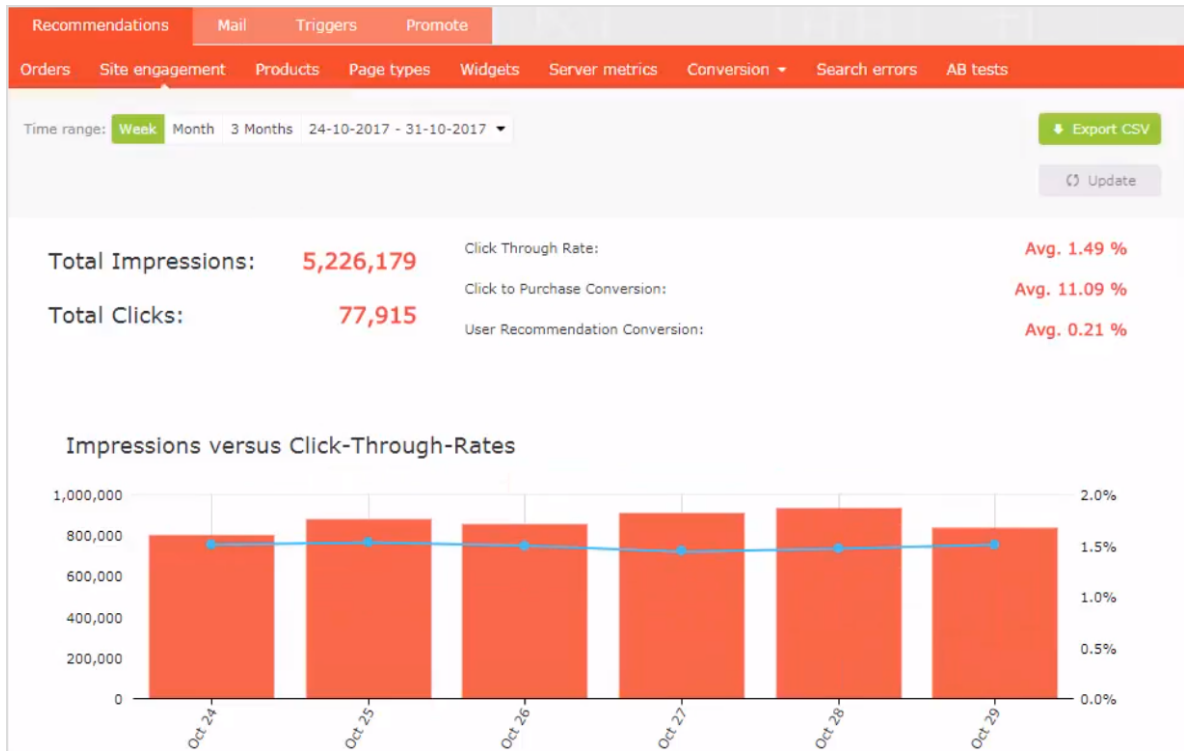

- **Orders data table.** Shows revenue and products shown in a table. You can organize orders, revenue, and products sold by the following columns.

Orders				
Revenue				
Products sold				
Total orders:		From Episerver recommendations:		% From Episerver recommendations:
45,864		4,649		10.14 %
Date ▼	Total ↕	From Episerver recommendations ↕	% From Episerver recommendations ↕	
24-10-2017	6,672	694	10.4 %	
25-10-2017	7,420	800	10.78 %	
26-10-2017	7,486	733	9.79 %	
27-10-2017	8,260	856	10.36 %	
28-10-2017	8,809	858	9.74 %	
29-10-2017	7,217	708	9.81 %	
Total:	45,864	4,649	10.14 %	

- o date
- o total number of tracked transactions, revenue or units sold for that date
- o total number of orders, revenue, or units sold, that contain or were sold through an Episerver product recommendation
- o the percentage of orders or products sold that contain an Episerver product recommendation

Site engagement tab

The **Site Engagement** tab shows page impressions, clicks, and click-through rates (CTRs) for product recommendations across your site.

- **Total impressions.** Shows the total number of page impressions where product recommendations were served.
- **Total clicks.** Shows the total number of clicks that have occurred on product recommendations.
- **Click through rate.** Shows a percentage and is worked out on the sum of clicks divided by the sum of impressions.
- **Click to purchase conversion.** Shows a percentage, and calculated on the sum of purchased recommended products divided by sum of clicks.
- **User recommendation conversion.** Shows the number of unique visitors who purchased a product recommendation, compared to the number of unique visitors who viewed a product recommendation, again shown as a percentage.
- **Impressions versus click through rates.** Shows a graphical representation of this information. The bars show the daily total number of page impressions with product recommendations, and the line shows the daily click through rate for product recommendations.

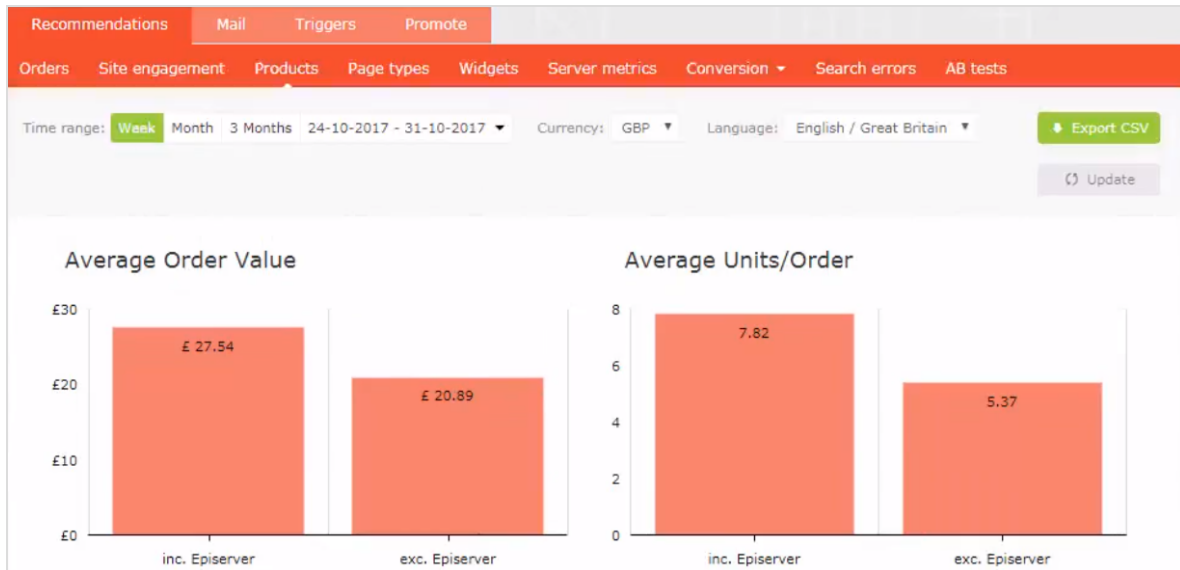

- **Site Engagement data table.** You can organize the data by the following columns.

Date ▾	Impressions ↕	Clicks ↕	CTR ↕	CTP ↕	URC ↕
24-10-2017	804,136	12,124	1.51 %	11.45 %	0.21 %
25-10-2017	877,334	13,393	1.53 %	11.11 %	0.22 %
26-10-2017	858,335	12,875	1.5 %	10.4 %	0.21 %
27-10-2017	909,440	13,057	1.44 %	11.5 %	0.23 %
28-10-2017	936,594	13,795	1.47 %	11.69 %	0.22 %
29-10-2017	840,340	12,671	1.51 %	10.38 %	0.2 %
Total:	5,226,179	77,915	1.49%	Avg. 11.09%	0.21 %

- Date
- Total number of impressions
- Total number of clicks
- Percentage of product recommendations that were clicked
- Percentage of purchased product recommendations after having been clicked on
- Percentage of unique visitors who purchased from product recommendations versus unique visitors who saw product recommendations

Products tab

The **Products** tab shows the best-selling products on the site based on the revenue generated from product recommendations.

- **Average order value.** Shows the average order value of orders that contained an Episerver product recommendation compared to those that did not over the specified period.
- **Average units/order.** Shows the average number of units purchased in orders that contained an Episerver product recommendation, compared to those that did not, again over the specified period.
- **Revenue from Episerver.** Shows revenue generated from Episerver product recommendations on a daily basis through the time period, providing a visual to see trends in behavior.

- **Best-selling products data table.** The table in the portal shows the top 10 products. However, you can export a full list by clicking **Export CSV**. You can organize the data by the following columns.

Totals:		Total Units Sold:	Recommendation Based Units:	Total Revenue:	Recommendation Based Revenue:
		276,686	9,677	£1,104,421.97	£41,994.51

Wish List	7,976	105	1.32%	8	7.62%	£41.73
Totals	4,959,221	73,580	1.48	8,651	11.76	£37,512.84

- Page type names where product recommendations are present
- Number of impressions for that page type
- Number of clicks on product recommendations for that page type
- Click-through rate (CTR) for product recommendations, which is shown as a percentage, calculated by sum of clicks divided by sum of impressions
- Items Bought shows the number of items purchased through product recommendations on that page type
- Click to Purchase (CTP) rate for product recommendations shows a percentage, calculated by sum of purchased recommended products divided by sum of clicks
- Revenue generated from product recommendations on each page type.

Widgets tab

The widgets reporting page is similar to the Page type report, but with finer detail for individual widgets, because some pages may have more than one widget.

- **Widget report by revenue.** The pie chart presented to visitors shows which widgets are generating the most revenue.
- **Widget data table.** Shows similar information as Page Types, except based at the widget level. Click on a widget name to see the individual position performance details within a widget. You can organize the data by

the following columns.

Widget	Impressions	Position	Clicks	CTR	Items Bought	CTP	Revenue
1 favourite	308	-	15	4.87%	1	6.67%	£3.49
1 wishlist	2,705	-	33	1.22%	3	9.09%	£7.77

Server Metrics tab

The **Server Metrics** tab shows two graphs:

- Number of product recommendations served per day

- Average time it takes to generate product recommendations and return them to a site (that is after a tracking request is sent)

Conversion tab

The **Conversion** tab shows the ranking of products based on their overall conversion and page views on a site. It does not focus on product recommendations but can provide easily accessible, actionable insights based on your whole site and all visitors and all orders.

The screenshot shows a web interface for product recommendations. At the top, there are tabs for 'Recommendations', 'Mail', 'Triggers', and 'Promote'. Below these are navigation links for 'Orders', 'Site engagement', 'Products', 'Page types', 'Widgets', 'Server metrics', 'Conversion', 'Search errors', and 'AB tests'. The 'Conversion' tab is active. The interface includes a 'Time range' selector set to 'Week' (24-10-2017 - 31-10-2017) and a 'Currency' dropdown set to 'GBP'. There are buttons for 'Export CSV' and 'Update'. Below the navigation, there are four filter categories: 'High converting, high traffic' (selected), 'High converting, low traffic', 'Poor converting, high traffic', and 'Poor converting, low traffic'. The main section is titled 'High converting, high traffic - Preserve them' and includes a help icon and the text 'How are these reports calculated?'. A table displays the following data:

Product ref.	Title	[?] Page views	Units bought	Conversion %	[?] Revenue per page View	Revenue
535403	SlimFast Snack Bar Heavenly Choc 24g	154	1,261	818.83%	£3.68	£567.34
535216	SlimFast Snack Bag Cheddar Bites 22g	159	1,260	792.45%	£3.51	£558.25
535402	SlimFast Snack Bar Choc Caramel 26g	291	2,119	728.18%	£3.14	£913.78
534607	SlimFast Milkshake Bottle Cafe Latte 325ml	148	948	640.54%	£8.49	£1,255.83
370301	5:2 LighterLife Fast Banana Flavour Shake	168	696	414.29%	£5.55	£932.31
370402	5:2 LighterLife Fast Chocolate Flavour Shake	356	1,283	360.39%	£5.00	£1,780.92
370500	5:2 LighterLife Fast Fragrant Thai	158	456	288.61%	£5.40	£853.32

Conversion definitions

- **High converting.** Any product that is in top 10 of the highest 10% of conversions
- **Low converting.** Any product that is in the lowest 10 of the lowest 10% of conversions.

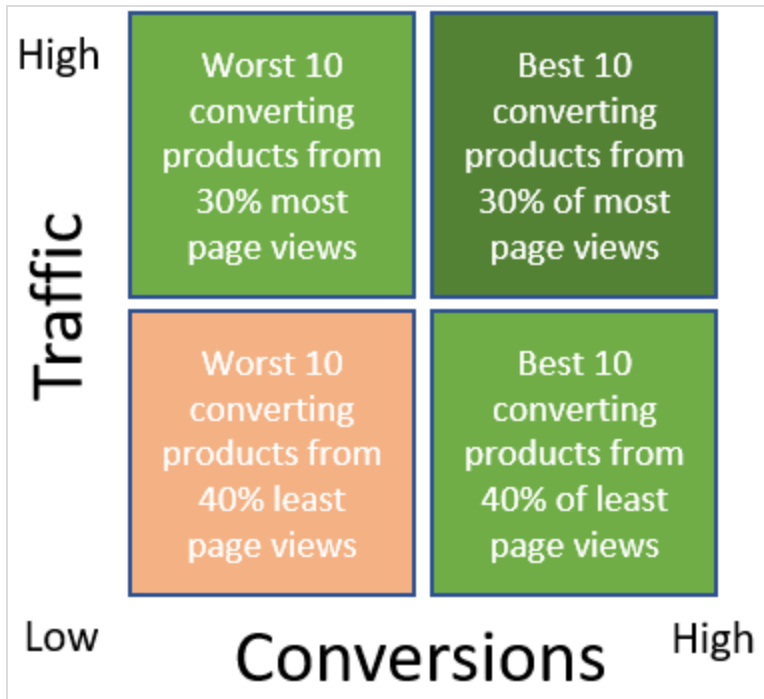

Traffic definitions

- **High traffic.** Any product that is in the top 30% of page views.
- **Low traffic.** Any product that is in the lower 40% of page views, and with the very lowest 10% excluded.

The following list and image shows the various combination views of conversion data.

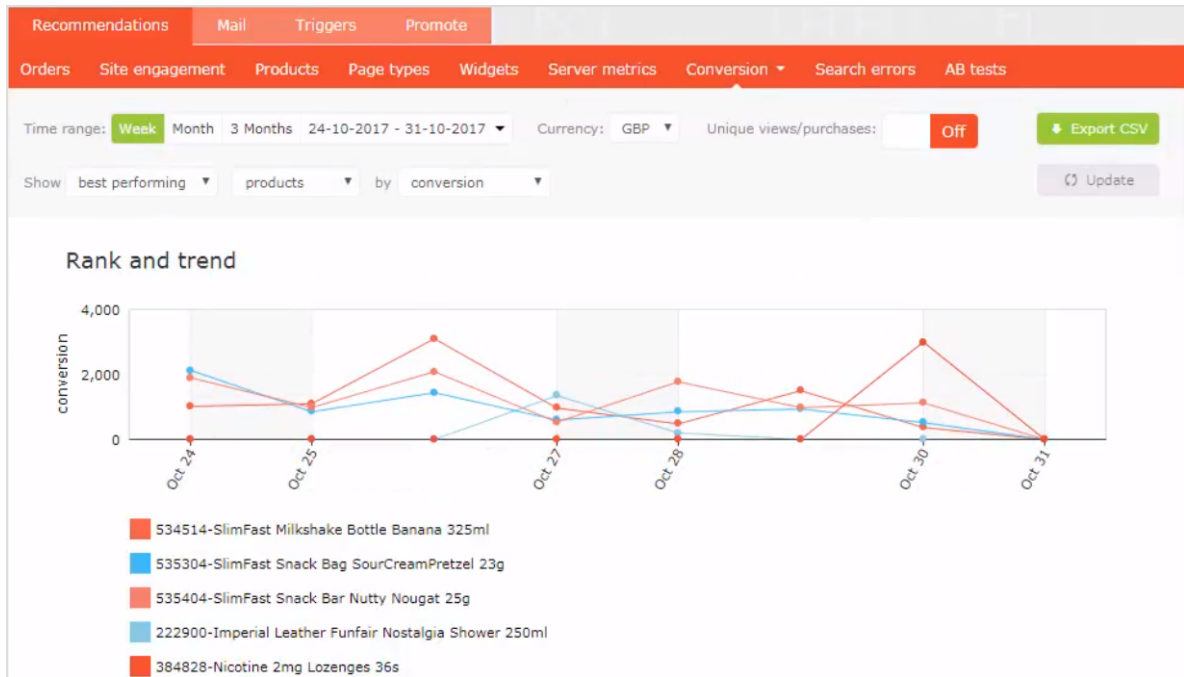

- **High converting, high traffic.** The best 10 best converting products on the site from the top 30% of products with most page views.
- **High converting, low traffic.** The best 10 best converting products on the site from the 40% of products with the least page views, excluding the 10% of products with the lowest number of page views.
- **Low converting, high traffic.** The worst 10 converting products on the site from the top 30% of products with most page views.

- **Low converting, low traffic.** The worst 10 converting products on the site from the 40% of products with the least page views, excluding the 10% of products with the lowest number of page views is displayed.

Rank and trend view

The **Conversion Rank and trend** view lets you generate a *Top 5* report of products, categories or brands sold on your site, based on a combination of criteria – best or worst performing by page views, revenue or conversion. The generated report shows data on the total page views, units bought, conversion, revenue per page view and total revenue from all sales on your whole site.

Search errors tab

The **Search Errors** tab shows the terms used in a site search that returned no results.

Term [?]	Instances [?]	Unique visitors [?]
*** Empty Search Keywords ***	59,035	41,981
search	653	557
red technique	336	284
glitter glue	329	298
roxxsaurus	329	282
hydra genius	305	276
tan eraser	224	209
soap and glory	219	192
nyx	215	195
beauty blender	146	112
milani	137	128
loreal hydra genius	132	118

You can sort by the following criteria:

- The term that was searched
- The number of times a term was searched
- The number of unique visitors who searched for a term

AB tests tab

The **AB tests** tab shows the results from the latest Perform A/B test on a site, and past tests.

	testA	testB	Var %
Sessions	1413998	1413793	-0.05 %
Unique visitors	1342825	1343363	0.04 %
Revenue (GBP)	1,115,330.48	1,111,860.64	-0.35 %
Orders	51961	52366	0.74 %
Items	300372	305193	1.56 %
Conversion rate	3.87 %	3.90 %	0.73 %
Session conversion	3.67 %	3.70 %	0.92 %
Average order value (GBP)	21.46	21.23	-1.06 %
Revenue per visitor (GBP)	0.83	0.83	-0.28 %

You can do the following in the AB tests view.

- Filter the results to specific dates by selecting the date range from the range bar.
- Set the control group.

Note: A/B testing supports up to 5 groups so you can view A-to-E testing.

- Select a specific currency that you want to examine.
- In the table you can view and compare key metrics on the site between all test groups, such as:
 - Visitor sessions
 - Site revenue
 - Conversion rate
 - Average order value through average selling price and units per order
 - Recommendation engagement and revenue

Daily charts

The **Daily Charts** view shows graphs for revenue generated, average conversion rates, average order value, average selling price, through to average number of units sold and number of sessions per day on the site.
