

ONE solution for ColdFusion, ASP, ASP.NET, and PHP!

Ektron offers a family of CMS products to fit the needs of any business or organization. Starting with Ektron's flagship product – Ektron CMS200 – is robust, browser-based Web content management starting under \$3,000. Advanced Web publishing features include: advanced workflow, scheduling of content, summary/teaser display, user-maintained navigation, e-mail notification, multi-dynamic Web application server support, content syndication, cascading style sheet support, and the most flexible permission model available in any CMS today!

With features like a Windows 2000-like menu structure and Ektron's market-leading WYSIWYG XHTML/HTML editor, our customers tell us our solutions are the most intuitive they have ever used. Developers benefit from Ektron's unique component-based approach to integration (which lets them stay in control!) and the ease in which they can brand this product as their own – both style and logos can be customized.

By focusing on the cutting edge of Web technology, Ektron has developed an even more robust solution – Ektron CMS300 – which in addition to core CM features, offers XML authoring and XSLT technology with the ability to serve Web content to multiple devices. Ektron's entry-level solution starting under \$500, Ektron CMS100, offers an easy migration path to Ektron CMS200 or Ektron CMS300.

For a pure ColdFusion-based robust CM solution that runs on a non-Windows server environment, Ektron offers Ektron eMPower. Macromedia Dreamweaver extensions are also available for all Ektron's products—allowing developers to easily insert content blocks and custom tags directly into a Web page/template.

"Using Ektron eMPower rather than building our own solution saved us hundreds of hours of development time and thousands of dollars."

- T.Spaid, Ace Web Site Builders (for SOLINET project)

"Ektron CMS200 was up and running..in less than two weeks, freeing up valuable development resources to focus on other business critical applications." - P.Sita, Innovative IT

Since 1998, more than 5,000 Web developers, system integrators, and major software vendors have integrated Ektron's technology into thousands of Web sites and custom-built Web applications. More than 1 million people use Ektron products in more than 40 countries.
